

DEV MANKAD

Full-Stack Engineer | +91 7990538590 | devmankad12@gmail.com | Ahmedabad, India

Full-Stack Engineer - React - Node.js - TypeScript - REST & GraphQL APIs

PROFESSIONAL SUMMARY

Full-Stack Engineer with 2.5+ years building and shipping production features across React and Node.js, with REST and GraphQL API delivery and TypeScript throughout, for international healthcare and enterprise markets. Integrates complex third-party SDKs and real-time data pipelines. Adapts rapidly to any full-stack technology or language, pairing deep product-cycle ownership with third-party integrations and Agile delivery. A hands-on agentic engineer who designs and operates AI agent systems - autonomous workflows, custom Claude Code skills, MCP server integrations, and the BMad method - to drive features end-to-end from requirement to production.

TECHNICAL SKILLS

Languages & Frameworks: Node.js, React, Django, Ruby on Rails

Architecture: REST & GraphQL APIs, MVVM, Clean Architecture

Tools & Integrations: GraphQL, Firebase, Jira, VIMscore, AppThera, Figma, Confluence, Slack

Version Control: GitHub (PRs, tags, branching strategy, code review), Git

CI/CD & DevOps: GitHub Actions, AWS, Azure

Agentic Engineering & AI: Claude Code, MCP servers, Custom slash-command skills, Multi-agent workflows, BMad method, Recurring agent loops, Hooks & persistent memory, Prompt engineering, Codex

PROFESSIONAL EXPERIENCE

Software Engineer - Gateway Group of Companies, Ahmedabad, India

January 2024 - Present (2.5+ years)

- Built React web applications and internal tools in TypeScript, consuming the same REST and GraphQL services as the client applications.
- Led architectural design and deployment of production-grade client applications and their supporting full-stack services for international healthcare and enterprise markets.
- Received the company R&R (Rewards and Recognition) Award for "Above and Beyond Performance" in project execution and delivery.
- Partnered with cross-functional teams (designers, product managers, backend developers, and QA) to deliver full-stack solutions on time.
- Conducted rigorous code reviews, established clear Git branching strategies, and authored comprehensive technical documentation to maintain code modularity and readability.
- Architected and operate a suite of agentic engineering workflows on Claude Code (custom slash-command skills, MCP integrations across Jira, Confluence, Slack, and Figma, the BMad multi-agent method, and recurring agent loops) that automate requirement-to-release delivery, code review, and documentation, dramatically increasing engineering throughput.
- Collaborated deeply with European clients (Norway, Germany, France) to build certified software under rigorous health-compliance frameworks (DiGA, HAS, PECAN).

KEY PROJECTS

Tymewear

USA

Full-Stack: React web dashboard - Django (Python) backend - REST API design - real-time sensor data pipelines

- Built the React web dashboard for the platform in TypeScript, consuming the Django REST APIs to surface training and biometric data.
- Integrated third-party fitness platforms (Garmin, Wahoo, Intervals.icu) for seamless bidirectional synchronization of workouts, training loads, and biometric data across ecosystems.
- Led development of the Tymewear platform end to end - client application plus Django/Python backend services - designing REST APIs, real-time sensor data pipelines, and device connectivity.
- Applied agentic engineering (self-built /dev-loop and /design-spec workflows) to drive features from Jira ticket to built feature to release, accelerating delivery while enforcing code-review and definition-of-done gates.
- Enabled live tracking of breathing, heart rate, and other biometric metrics, visualised via graphs and analytics dashboards for training-zone monitoring.
- Supported device-pairing workflows and offline session sync so data was preserved and reconciled server-side even when the client was out of range.

Lifeness

Norway / Germany

Full-Stack: React web portal - Ruby on Rails backend - GraphQL API - DiGA & PECAN certified healthcare platform

- Built the React web portal for the platform, consuming the same Ruby on Rails GraphQL API as the client application.
- Delivered full-stack functionality for a research-based, DiGA and PECAN-certified healthcare application for lifestyle and chronic-disease management, spanning the client and a Ruby on Rails backend consumed via GraphQL.
- Led third-party integration of VIMscore for patient analytics, and managed build and release cycles across the delivery pipeline.
- Applied agentic engineering workflows (custom Claude Code skills, MCP-driven Jira/Confluence automation, and the BMad method) to plan, build, and document features end-to-end.
- Built scalable product features supporting chronic-disease prevention and lifestyle tracking, with multilingual support and chatbot integration.

AGENTIC ENGINEERING

Architect and operate custom AI agent systems on Claude Code that automate the software lifecycle end to end, turning a single requirement into shipped, reviewed, and documented production code.

- MCP platform integrations: Extended the agent runtime with MCP servers for Jira, Confluence, Slack, and Figma, so agents autonomously manage tickets, publish documentation, and pull live design and project context.
- Design-to-spec workflow (/design-spec): Turns a Figma link or screenshots into production-ready deliverables (a Figma-to-code mapping, a PRD, and a pixel-accurate interactive prototype) governed by a codified design system.
- Multi-agent orchestration (BMad method): Plan, build, and review complex features with a coordinated set of analyst, architect, PM, dev, and reviewer agents, using adversarial verification and scheduled agent loops to hold quality and consistency high.

EDUCATION

- B.Tech in Information Technology - Charotar University of Science and Technology (CHARUSAT), Changa, India
- Diploma in Computer Engineering - Government Polytechnic, Jamnagar

CERTIFICATIONS

- AWS Certified Cloud Practitioner
- Microsoft Azure Fundamentals

PUBLICATIONS & OTHER EXPERIENCE

- Blogs: "Azure Virtual Machine Deployment with VNet & Resource Groups"; "Demystifying Docker Commands CLI".
- Internships: AWS & Jenkins (TechieButler); Cloud Infrastructure & Security (Celebal Technologies).
