

DEV MANKAD

Cross-Platform Mobile Engineer | +91 7990538590 | devmankad12@gmail.com | Ahmedabad, India

Cross-Platform Mobile Engineer - Flutter - Kotlin Multiplatform - SwiftUI

PROFESSIONAL SUMMARY

Cross-platform Mobile Engineer with 2.5+ years shipping production Flutter, Kotlin Multiplatform, and SwiftUI applications for international healthcare and enterprise markets, with full ownership from architecture through App Store and Play Store release. Automates release engineering with Fastlane, GitHub Actions, and Firebase App Distribution. A hands-on agentic engineer who designs and operates AI agent systems - autonomous workflows, custom Claude Code skills, MCP server integrations, and the BMad method - to drive features end-to-end from requirement to production. Collaborates directly with European clients (Norway, Germany, France) on certified software built to DiGA, HAS, and PECAN health-compliance frameworks.

TECHNICAL SKILLS

Languages & Frameworks: SwiftUI, Kotlin, React Native, Dart, Flutter, Jetpack Compose, Kotlin Multiplatform (KMP), Splitties

Architecture: Cross-platform mobile architecture, REST & GraphQL APIs, MVI, MVVM, Clean Architecture

CI/CD & DevOps: Fastlane, App Store / Play Store deployments, Firebase App Distribution, GitHub Actions, AWS, Azure

Version Control: GitHub (PRs, tags, branching strategy, code review), Git

Tools & Integrations: GraphQL, Jira, Confluence, VIMscore, AppThera, Slack, Figma

Agentic Engineering & AI: Claude Code, MCP servers, Custom slash-command skills, Multi-agent workflows, BMad method, Recurring agent loops, Hooks & persistent memory, Prompt engineering, Codex

PROFESSIONAL EXPERIENCE

Software Engineer - Gateway Group of Companies, Ahmedabad, India

January 2024 - Present (2.5+ years)

- Led architectural design and deployment of production-grade Flutter and Kotlin Multiplatform applications for international healthcare and enterprise markets.
- Integrated complex third-party SDKs, hardware communication layers, and real-time data pipelines (VIMscore, AppThera, Livy chatbot).
- Conducted rigorous code reviews, established clear Git branching strategies, and authored comprehensive technical documentation to maintain code modularity and readability.
- Received the company R&R (Rewards and Recognition) Award for "Above and Beyond Performance" in project execution and delivery.
- Partnered with cross-functional teams (designers, product managers, backend developers, and QA) to deliver mobile solutions on time.
- Architected and operate a suite of agentic engineering workflows on Claude Code (custom slash-command skills, MCP integrations across Jira, Confluence, Slack, and Figma, the BMad multi-agent method, and recurring agent loops) that automate requirement-to-release delivery, code review, and documentation, dramatically increasing engineering throughput.
- Collaborated deeply with European clients (Norway, Germany, France) to build certified software under rigorous health-compliance frameworks (DiGA, HAS, PECAN).

KEY PROJECTS

Tymewear

USA

Mobile: Flutter / Dart - BLE & IoT sensor integration - real-time biometric tracking

- Led development of the Tymewear mobile app in Flutter/Dart, managing BLE connectivity, real-time sensor pipelines, and REST API integration (strap plus external sensors).
- Integrated third-party fitness platforms (Garmin, Wahoo, Intervals.icu) for seamless bidirectional synchronization of workouts, training loads, and biometric data across ecosystems.
- Enabled live tracking of breathing, heart rate, and other biometric metrics, visualised via graphs and analytics for training-zone monitoring.
- Applied agentic engineering (self-built /dev-loop and /design-spec workflows) to drive features from Jira ticket to built feature to release, accelerating delivery while enforcing code-review and definition-of-done gates.
- Supported sensor-pairing workflows and offline session sync so data was preserved even when the phone was out of range during activity.

Lifeness

Norway / Germany

Mobile: Kotlin Multiplatform (KMP) & SwiftUI - GraphQL API - DiGA & PECAN certified healthcare app

- Delivered a research-based, DiGA and PECAN-certified healthcare app for lifestyle and chronic-disease management,

built with Kotlin Multiplatform and SwiftUI against a GraphQL API.

- Led third-party integration of VIMscore for patient analytics and managed Firebase builds and active release cycles on the App Store and Play Store.
- Built scalable features supporting chronic-disease prevention and lifestyle tracking, with multilingual support and Livy chatbot integration.
- Applied agentic engineering workflows (custom Claude Code skills, MCP-driven Jira/Confluence automation, and the BMad method) to plan, build, and document features end-to-end.

AGENTIC ENGINEERING

Architect and operate custom AI agent systems on Claude Code that automate the software lifecycle end to end, turning a single requirement into shipped, reviewed, and documented production code.

- One-prompt store releases (Fastlane): Automated the entire release with custom Fastlane lanes for iOS and Android, so a single prompt (for example, "Add builds 1.4.0") builds, signs, and ships the app to both the App Store and Google Play in one pass, guarded by an automated static-analysis and test gate.
- MCP platform integrations: Extended the agent runtime with MCP servers for Jira, Confluence, Slack, and Figma, so agents autonomously manage tickets, publish documentation, and pull live design and project context.
- Multi-agent orchestration (BMad method): Plan, build, and review complex features with a coordinated set of analyst, architect, PM, dev, and reviewer agents, using adversarial verification and scheduled agent loops to hold quality and consistency high.

EDUCATION

- B.Tech in Information Technology - Charotar University of Science and Technology (CHARUSAT), Changa, India
- Diploma in Computer Engineering - Government Polytechnic, Jamnagar

CERTIFICATIONS

- AWS Certified Cloud Practitioner
- Microsoft Azure Fundamentals

PUBLICATIONS & OTHER EXPERIENCE

- Blogs: "Azure Virtual Machine Deployment with VNet & Resource Groups"; "Demystifying Docker Commands CLI".
- Internships: AWS & Jenkins (TechieButler); Cloud Infrastructure & Security (Celebal Technologies).
